

WATER DOCTORS
WATER TREATMENT COMPANY est. 1984

Twin ARSENIC MASTER™

Custom Engineered Conditioner

Water Doctors 4-Stage Infinity™ Problem Water Management System

Stage 1

Fine sediment particles, sand, silica and iron oxide are trapped in a sub-micron filter. This filter is flushed and cleaned and backwashed to the drain when the Infinity™ system regenerates.

In stage 2

Water flows through an Iron removing media to selectively remove organic and inorganic matter. It is supplied in the form as clean, moist, tough, uniform, spherical beads.

Stage 2 This Macro Porous exhibits extraordinary throughput capacity in arsenic removal service on potable water supplies. Its oxidation performance is virtually unaffected by common anions, such as chlorides, bicarbonates or sulfates. It is effective over the entire pH range of potable water. Water Doctors system uses major advancement in water treatment technology that works on the electro-chemical oxidation-reduction principles.

In stage 4, water flows through our Micro Pore activated carbon (GAC). GAC is universally recognized and widely used as an effective adsorbent for a wide variety of organic contaminants, such as chlorine (99.9%), chemicals linked to cancer (THM's, benzene) pesticides, herbicides, insecticides, volatile organic compounds (VOC's), PCB's, MTBE's and hundreds of other chemical contaminants that may be present in water, bad taste, and odors from your drinking water. Coconut shell carbon provides a significantly higher volume of micro-pores than coal, wood or lignite-based carbon. As a result, it is more effective than other carbon types in removing trihalomethanes (THM's) and other chemicals from municipally supplied water.

Delivery: To be made within 1 week after receipt of order.

Retail List Price: 4 Stage System **\$6495.00**

Builder Direct Price \$5995.00 Installed

Terms: 50% Down- Net Due upon Completion.
