Water Doctors Capsule™ Iron Filter

The Capsule™ Iron Filter eliminates iron from your water and iron problems from your life.

The Water Doctors Capsule™ Iron Filter automatically removes soluble or “clear water” iron, precipitated or “red water” iron, bacterial iron, and manganese from your water. Because it requires none of the expensive or messy chemicals used in conventional filters, the Capsule™ Iron Filter is safe and environmentally-friendly.

If you're looking for crystal-clear, great-tasting drinking water; fresh, stain-free clothing; and sparkling dishes and bathroom fixtures, remove the iron from your water with the Water Doctors Capsule™ Iron Filter.

Advanced Features

- Minimal operating costs; no chemicals for regeneration
- Removes iron concentrations of up to 10 ppm/mg/L
- Only occasional backwashing required in order to conserve water
- Three models to choose from to fit any application
- Pentair 2510SXT control with user-friendly programming
- Fully-adjustable regeneration cycles
- Bypass included with ¾" or 1" MNPT Connections
- Heavy-duty mineral tank (lifetime warranty)
- Electrical: 24V/60 Hz (120V to 24V wall mount Class 2 transformer included)

WATER TREATMENT COMPANY

Our Capsule™ Iron Filter Katalox Light® is a remarkable new iron removal media from Germany.

It combines the versatility and high-performance characteristics of Filox™ media with the lightweight properties of Birm®, resulting in an economical treatment option for high levels of iron, manganese, and hydrogen sulfide that is easy to backwash. This results in substantial water savings, making Katalox Light® an ideal option for wells with low water yield. Like most iron removal media, Katalox Light® acts as an insoluble catalyst to enhance the reaction between dissolved oxygen and the iron compounds to form ferric hydroxide. This is then removed through mechanical filtration in the media bed. As a catalyst, Katalox Light® is not consumed in the iron removal process, and it does not need to be regenerated. Also, like most other iron removal media, the active ingredient in Katalox Light® is manganese dioxide. Katalox Light® is composed of a manganese dioxide-coated zeolite, containing about 10% manganese dioxide, far higher than Birm®, but less than Filox™.

Water Doctors' proprietary stratified media is used for removing soluble iron, manganese, hydrogen sulfide, arsenic and radium from well water supplies.

Water Doctors Water Treatment Company is a Minnesota-based national supplier of residential and commercial water filtration equipment.

Together with our parent company, HMI Water Specialists, Water Doctors has over 37 years of experience in the water treatment business. We have established a reputation as the industry leader in providing the highest quality equipment in this very specialized field. We employ a full staff of installation technicians, design engineers, and service professionals that bring 350 years of combined water service experience to the table.

This system has been tested for the treatment of water containing pentavalent arsenic (also known as As(V), As(+5), or arsenate) at concentrations of 0.050 mg/L or less. This system reduces pentavalent arsenic, but may not remove other forms of arsenic. This system is to be used on water supplies containing a detectable free chlorine residual or on water supplies that have been demonstrated to contain only pentavalent arsenic. Treatment with chloramines (combined chlorine) is not sufficient to ensure complete conversion of trivalent arsenic to pentavalent arsenic. Please see the Arsenic Facts section of the Performance Data Sheet for further information.
